

701 km in 8 hours. The Mumbai–Nagpur Expressway is officially open. But what does it really mean for India’s transporters?

On June 5, 2025, the final stretch of the **Samruddhi Mahamarg** was launched — connecting Mumbai and Nagpur in just 8 hours.

No red lights. No ghat jams. No overnight halts.

But speed comes with its own challenges.

Here’s what **transporters, fleet owners, and drivers** must know:

- ◆ **Time is money now**

Faster trips mean more deliveries per truck, better turn-around time, and reduced driver fatigue. If used smartly, this road can double your fleet’s productivity.

- ◆ **Toll costs are higher**

With tolls averaging ₹2.30/km, a full trip may cost over ₹2,000. Route planning and cost forecasting matter more than ever — especially for small operators.

- ◆ **Discipline on road is stricter**

Speed cameras, designated exits, and limited service areas mean drivers must plan ahead. This isn’t just a faster route — it’s a smarter one.

◆ **Smarter Logistics Starts with Smarter Visibility**

When trucks move, data should move with them.

With **FASTag**, you don’t just pay tolls — you get **real-time insights** into your fleet’s movement.

- **Toll = Location Update**

Each toll crossed logs the date, time, and place — giving you real-time movement clarity.

- **Trip Visibility Made Simple**

You can now track truck movement by checking toll activity — no delays, no guesswork.

- **Supports Better Load Management**

Get a sense of delays or smooth trips by tracking toll intervals.

- **Plan Better. Respond Faster.**

With toll logs, you know where your trucks have been — and whether they’re on the right path.

📦 **This isn’t just a highway. It’s a new way forward for Indian logistics.**

Ready to make the most of it?
